

June 28, 1938.

Mr. Francis Lyman,  
Boulder, Utah.

Dear Mr. Lyman:

REL: BOULDER CREEK DIST.

This will acknowledge receipt of your Distribution Report on Deer Creek-Boulder Creek system for the year 1937, which I have read, and while you give some facts which have not been of record heretofore in this office, I was disappointed to learn you had not kept records since you state it was only from my recent letter you understood such a report was expected; therefore, only general statement of facts could be given. I felt in reading the letter that there must have been a misunderstanding, since I have always made it plain to newly appointed Commissioners that a report would be expected; therefore, they must maintain their records in readiness so a report could be filed at the end of the irrigation season.

In checking the records I find this information was conveyed to you by letter from this office dated July 6, 1937, wherein I advised you were appointed Water Commissioner on the Boulder Creek system for the season of 1937. In this letter I stated that you should inform yourself on the rights of all the users so that at all times you would be in full possession of the facts relating water rights on your system, and that your records of flow of the main stream and diversions should be recorded daily and kept in such form as to be readily accessible; also filed so that at the end of the irrigation season you would have full data for use in making a report which would be expected of you. This is now past, however, and I am hopeful that in the future information may be obtained with reference to stream flow and diversions from Boulder and Deer creeks which can be made into a permanent record.

On page 2, under your heading "Sketch Map of Distribution System" you refer to a blueprint map on file in this office, submitted by the Boulder Irrigation & Reservoir Company, which map gives the proposed reservoirs, existing and proposed canals, and land irrigated. I have made a search of the files of the office and have not as yet been able to locate such a map. Will you kindly advise for what reason the map was submitted, to this office, when it was submitted, by whom, and for what purpose. With that information I may be able to locate same. This is quite necessary since maps are filed in this office under Proof of Appropriation, Small Reservoir Investigations, Plans of Dams, and other headings; therefore, it is impossible to locate a map unless we know the purpose for which it was submitted.

Mr. Francis Lyman.

6/28/38.

I appreciate the promptness with which you have answered the

correspondence from this office and the interest you have taken as

Commissioner on this system.

Yours very truly,

L. H. Humphreys

STATE ENGINEER.
